

Quadrus® MINI Velocity Imager

The Quadrus MINI Velocity sets a new standard for high performance mini imagers for data tracking. The ultra-compact imager reads all standard 2D or linear bar codes, plus multiple codes per capture at high speed, with real time autofocus. With easy setup and outstanding read rate performance, the Quadrus MINI Velocity is an ideal solution for virtually all dynamic bar code applications. Dynamic, High Speed Reading: The Quadrus MINI Velocity decodes linear barcodes and 2D symbols omnidirectionally in moving applications at speeds over 100 inches per second (254 cm/sec). Autofocus: For real time dynamic autofocus, position the symbol at the center of the field of view, and push the EZ button. The Quadrus MINI Velocity automatically adjusts focal distance and sets internal parameters to optimize the symbol. Wide Field of View: High resolution zero-distortion optics, diffractive full field illumination, and a wide field of view allow symbols as large as 2" (50.8 mm) square to be read as close as 1" (25.4 mm) with the optional right angle mirror. Ease of Use: The imager series includes such user-friendly features as visible performance indicators, ESP® software, and one touch setup and configuration. EZ Trax™ Option: Image capture and storage software provides tracking of symbol images. Compact Shape/Size: The Quadrus MINI Velocity's small form factor allows for flexible positioning in tight spaces or mounting into robotic applications.

Description

- Decodes/second: up to 60
- Patented Quadrus Technology
- Autofocus
- Optional USB Connectivity
